

# Technology of precision diffusion welding in precise instrument engineering

**A.G.Scherbak, V.G.Kedrov**

166 p.

Saint-Petersburg, CSRI "Elektropribor", 1997

ISBN 5-900780-14-7

The principles and methodology are stated for the systems engineering of precision vacuum diffusion welding as a process component for developing objects of new technology. The technical solutions obtained on this basis are described, including techniques, methods, equipment facilities and algorithms for the welding technology design.

The book is intended for engineers and scientists engaged in precise instrument engineering.

## CONTENTS

<b>Introduction</b>	<b>3</b>
<b>Chapter 1. Precision vacuum diffusion welding as a means for realization of permanent assemblies of precise instrument engineering joints (PIEJ)</b>	<b>7</b>
1.1. Permanent assemblies in PIEJ	-
1.2. Characteristics and features of construction materials	12
1.3. Welding features of materials used in PIEJ	18
1.4. Block diagram for solving problems of precision vacuum diffusion welding (PVDW)	27
<b>Chapter 2. PVDW technology design</b>	<b>34</b>
2.1. System of problem solution models for developing PVDW technology	-
2.2. Multilevel iterative method for precision welding process development	50
2.3. Information-logical model for PVDW technology designing	58
<b>Chapter 3. Theory and technological fundamentals for PVDW process</b>	<b>68</b>
3.1. Investigation of control principles for PVDW thermomechanical parameters and factors	69
3.2. Development of PVDW process with regulated load of external drive and under thermal tightness pressure	74
3.3. Development of initial conditions and estimation criteria for assembly formation possibility	87
3.4. Software and design procedure for process of wire intermediate layers formation	97
<b>Chapter 4. PVDW process equipment facilities</b>	<b>107</b>
4.1. Set for diffusion welding with local electron-beam heating	108
4.2. Set for multiposition PVDW of elements on parts of rotation body form	110

4.3. Welding module with combined pressure	113
4.4. Set for multiposition PVDW with thermal tightness pressure	115
4.5. PVDW module for thin-walled hemispherical shells	117
<b>Chapter 5. Technology development and practical PVDW realization when producing joints for precise instrument engineering</b>	<b>120</b>
5.1. Assembly units of gyro devices	-
5.1.1. Beryllium rotors of electrostatic gyro	-
5.1.2. Metal-ceramic joints of sensor gyrohousing	141
5.1.3. Joints and elements for spherical gyro with gas aerodynamic suspension, floated gyro and gravimeter core	153
5.2. Products of ionizing radiation technique	154
5.3. Joints with long-length capillary channels for products of analytical instrument engineering	157
<b>Conclusion</b>	<b>159</b>
<b>References</b>	<b>160</b>

V.E. Dzhashitov, V.M. Pankratov / Under the general editorship of the RAS Academician V.G. Peshekhonov

150 p.

St. Petersburg: SRC of Russia - CSRI "Elektropribor", 2001

ISBN 5-900780-30-9

Mathematical models of classical and promising gyroscopic inertial data sensors of various physical principles and laws of operation have been considered. Principles of operation and dynamics fundamentals of thermally disturbed inertial gyroscopic sensors, devices and systems based on them are stated. Mathematical models of thermal drift of float, dynamically tuned, electrostatic non-contact, wave solid-state, micromechanical and fiber-optic gyros have been constructed and investigated. Particular attention has been given to the new mathematical models of thermal drift making it possible to investigate the phenomenon of deterministic chaos in non-linear thermally disturbed dynamic systems with inertial sensors.

The book is intended for scientists, engineers and technicians. Also it can be useful for post-graduates and students of higher education institutes.

Bibliography: 16 references. 34 illustrations. 1 table.

## CONTENTS

<b>Introduction</b>	<b>5</b>
<b>Chapter 1. Models of bound physical processes of mechanical motion,</b>	<b>10</b>

**heat-mass exchange, thermoelasticity, hydromechanics and optics for sensors  
of various principles of operation**

1.1. Problems of mathematical models construction and their solution strategy	-
1.2. Mathematical models and investigation methods for thermal processes in gyroscopic sensors of inertial systems	15
1.3. Mathematical models and investigation methods for mechanical motion processes in gyroscopic sensors of inertial systems	24
1.4. Mathematical models and thermoelasticity theory methods in investigation of stressed and deformed state of gyroscopic sensors of inertial systems	27
1.5. Mathematical models and investigation methods for hydromechanical processes in gyroscopic sensors of inertial systems	30
1.6. Mathematical models and investigation methods for optic processes in fiber paths of gyroscopic sensors of inertial systems	33
<b>Chapter 2. Inertial data sensors of various physical principles of operation</b>	<b>38</b>
2.1. Float inertial sensors - principle of operation, mathematical models, investigation problems	-
2.2. Rotor vibratory dynamically tuned inertial sensors - principle of operation, mathematical models, investigation problems	48
2.3. Electrostatic spherical inertial sensors - principle of operation,	57

mathematical models, investigation problems	
2.4. Wave solid-state inertial sensors - principle of operation, mathematical models, investigation problems	63
2.5. Micromechanical inertial sensors - principle of operation, mathematical models, investigation problems	74
2.6. Fiber-optic inertial sensors - principle of operation, mathematical models, investigation problems	108
2.7. Systematization of mathematical models of thermally disturbed inertial sensors	118
<b>Chapter 3. Special construction and investigation problems of mathematical models of thermally disturbed inertial data sensors</b>	<b>128</b>
3.1. Deterministic chaos in disturbed non-linear gyroscopic systems - general approach	-
3.2. Deterministic chaos in thermally disturbed fiber-optic inertial sensors	139
<b>Conclusions</b>	<b>148</b>
<b>References</b>	<b>149</b>
