AC Electronic Inductor Jet Motors also known as Switched Reluctance Motors (**SRM**) are considered. Production-friendly construction of motor, simple diagram of valve switch, rotor sensor, potentialities of microprocessor current rise determine SRM choice for modern automatic control systems. SRM competitiveness is provided with specific configuration of tooth area and increased electromagnetic load values for starting conditions.

Different kinds of SRM embodiment are analyzed, tooth area parameters are systematized, analytic expressions for motor electromagnetic torque are obtained. Equations for magnetic field and ponderomotive forces are considered as well as features of magnetic field simulation in SRM. Motor starting moment ripples are examined. Differential equations of electromagnetic and electromechanical processes are presented for SRM transient and steady modes. Motor design procedure is stated. Block diagrams of valve switches, ways of control signals generation and composition of microprocessor control system software are given.

The book is intended for the specialists involved in designing of electric motors and automatic control systems as well as students and post-graduates acquiring the same profession.

Bibliograph.: 123, Illustr.39.

On behalf of the Organizing Committee of the 4th Conference of Young Scientists *Navigation and Motion Control*

Session "Smart control systems"

S.N.Vasiliev

Logical approach to dynamic systems control (L e c t u r e) 7

E.A.Cherkashin

Using artificial intelligence for information-control systems 24

T.I.Madzhara	
A computer-aided system for solving optimal control problems	31

Session "Gyroscopic systems"

A.A.Stolbov	
On increasing the calibration accuracy of the inertial navigation system based on attitude gyros	38
A.M.Boronakhin	
The use of analytical gyro vertical for navigation on the railway track	45
V.V.Pchelin, A.V.Uskov	
A stabilized gyro compass based on a strapdown short-period vertical	53
N.V.Goncharov, Yu.V.Filatov	
Development of goniometric methods and means for monitoring the vehicle attitude	58

Session "Data processing"

L.A.Mironovsky	
The theory of invariants and its application in diagnosis (L e c t u r e)	64
Yu.A.Litvinenko	
Kalman filter sensitivity to uncertainty of water current when solving the problem of inertial navigation system damping by the log	83
A.P.Aleshkin, T.O.Myslivtsev	
Adaptive empirical estimation of the state vector for a spacecraft under measurement shortage	89
M.S.Koryukin	
The use of neuronet algorithms for processing data from redundant sensors	97
G.V.Bezmen	
The possibility analysis for using neural networks in solving filtering problems	103
K.Yu.Petrova	
Optimization of defect distinguishability in test diagnosis	107
I.S.Kayutin	
Study of digital data processing algorithms for an acceleration sensor	115
D.P.Loukianov, A.Ya.Maizelis	
Investigation of speed variations for high-speed gas flows in variable	121

cross-section nozzles

V.A.Smirnov

Algebraic synthesis of controllers of gyroscopic stabilization and control systems 129

A.V.Bobkov

A system of positioning by the terrain image on the basis of line set analysis 137

Session "Sensors of navigation and control systems"

M.I.Evstifeev, M.F.Smirnov, A.A.Untilov

The analysis of mechanical, electrical and thermal characteristics in designing a micromechanical gyro 142

D.P.Loukianov, I.Yu.Ladychuk

Study of microaccelerometers using surface acoustic waves 149

Yu.V.Shadrin, S.G.Kucherkov

Dynamic characteristics of a ring micromechanical gyro with the open loop 155

Yu.V.Povodyrev, S.M.Dyugurov

Development of methods and means to increase the accuracy of the angular data pickup system of a strapdown electrostatic gyro 160

V.N.Khodurov

Experimental investigation into the thermal drift of fiber-optic gyros 165

D.I.Lychev, S.G.Kucherkov

A precision rotary test bench for testing a micromechanical gyro 171

Session "Control theory and systems"

V.O.Nikiforov

Control of vehicles with roughly known characteristics: roughness, adaptation and robustness (L e c t u r e) 177

V.O.Rybinsky

Robust stabilization of linear periodic systems 188

K.Yu.Polyakov

Ultimate possibilities of smoothing random processes using continuous-digital filters 196

O.E.Yakupov

An adaptive electro-hydraulic servo drive of the aircraft 203

T.V.Turenko

A hybrid model of the direct digital control system with a unitary-code211
sensor

A.G.Klimenkov, A.L.Starichenkov, T.S.Chernysheva

The software of the simulator for hydrofoil ship motion control 218

**Session "Electronic and electromechanical devices of navigation
and control systems"**

V.D.Aksenenko, S.I.Matveev

Synchronous demodulation using the digital signal processing technique 225

Ya.V.Belyaev, Ya.A.Nekrasov

The methods for estimating the accuracy of a temperature stabilization
system using the software for thermal fields calculation 229

A.M.Richnyak

A superconductive geomagnetic motor for spacecraft orientation and
stabilization systems 233

Session "Computer technologies in navigation and control"

A.A.Belash, S.S.Gurevich

The central computer of the strapdown inertial attitude system and its
software 241

D.A.Tomchin

The virtual laboratory for study and control of a single-rotor vibration
bench 246

S.N.Turusov, O.Yu.Lukomskaya

The system of informational support for organizational readiness of the
ship's crew 253

Session "Ship navigation"

A.V.Ulanov

The analysis of alternative approaches to managing the controlled motion
of an underwater gliding vehicle 261

I.F.Shishkin, A.G.Sergushev

Using the science about tracks in water areas 268

A.G.Shpektorov, V.A.Zuev

Stabilization of a high-speed vehicle at the prescribed route 274

N.V.Kuzmina

Contrasting color of auxiliary information in the marine direction-finder 280

Session "Integrated navigation and orientation systems"

A.M.Boronakhin, A.V.Kazantsev. S.A.Karpasov

The results of experimental investigations of the navigation system on the railway as a part of the track measurement car CSRI-4 286

S.V.Ignatiev

A stabilized gyrocompass based on fiber-optic gyros with rotating sensor unit 291

A.A.Pisarevsky, A.N.Doronin

The integrated system for aircraft 299

Yu.V.Gavrilenko, N.A.Zaitseva, E.V.Kochneva

Suboptimal double-step filter for special navigation problems 303

Round table

"The results and forms of holding a conference using the Internet"

Yu.A.Litvinenko, O.A.Stepanov, D.O.Taranovsky

The experience in holding the conference of young scientists *Navigation and Motion Control* using the Internet 309

List of authors 315

Foreword 5

Gravimetry

L.K. Zheleznyak, V.N. Koneshov

Up-to-date methods for studying gravity field of the World ocean 9

L.K. Zheleznyak

The Russian marine gravimetric system 14

A.V. Sokolov, S.V. Usov, L.S. Elinson	21
Gravity survey in conditions of marine seismic work	
B.A. Blazhnov, L.P. Nesenjuk, V.G. Peshekhonov, A.V. Sokolov, L.S. Elinson, L.K. Zheleznyak	33
An integrated mobile gravimetric system. Development and test results	
V.N. Ilyin, Yu.L. Smoller, S.Sh. Yurist	45
A mobile ground-based gravity meter. Development and test results	
V.N. Berzhitzky , V.N. Ilyin , E.B.Saveliev, Y.L. Smoller, Yu.V. Bolotin, A.A.Golovan, N.A.Parusnikov, G.V. Popov, M.V. Chichinadze	48
GT-1A inertial gravimeter system design experience and results of flight tests	
O.A. Stepanov, B.A. Blazhnov, D.A. Koshaev	61
The efficiency of using velocity and coordinate satellite measurements in determining gravity aboard an aircraft	
Yu.I. Nikolsky	75
Problems of reduction in high-accuracy gravity measurements in geodesy and geology	

Gravity gradiometry

G.B. Volfson	90
State and prospects of gravity gradiometry development	
A.B. Manukin	
Design of a measuring system for a highly sensitive gravity gradiometer using vertical pendulums	105
M.S. Petrovskaya, G.B. Volfson	
Construction of geopotential models by the satellite gradiometry data	111
V.G. Peshekhonov, G.B. Volfson	
Problem solution for design of a gravity variometer operating on a moving base	118
G.B. Volfson, M.I. Evstifeev, V.G. Rozentsvein, M.P. Semenova, Yu.I. Nikolsky, E.V. Rokotyan, S.F. Bezrukov	122
A new generation of gravity variometers for geophysical investigations	

Borehole navigation

A.A. Molchanov, G.S. Abramov	136
Navigation in investigation of underground space in searching,	

exploring and developing mineral deposits	
V.G. Rozentsvein	146
State of the art of borehole gyroscopic navigation systems	
E.V. Freiman, S.V. Krivosheyev, V.V. Losev	168
Peculiarities of attitude algorithm construction for gyroscopic inclinometers based on a single-axis gyrostabilizer	
N.P. Rogatykh	178
Methodical aspects of inclinometer design	
V.M. Suminov, D.V. Galkin, A.A. Maslov	190
A mathematical error model of a gyro inclinometer
